# Two-sided vine trunk cleaner

## Efficient and gentle to the trunk

The two-sided vine trunk cleaner from freilauber has got a total of eight vertically mounted rolls with rubber flaps, which effectively and gently remove the sprouts from the trunk.

A parallelogram with extension springs makes sure that the roll straps always adjust to the level of the ground and allows them to work at a constant height as well as in a side slope.

In order to protect the device, all four roll holders come with a collision protection system. The roll holders are held in position by springs so that they can be pressed to the outside by bended sticks to avoid damage both at trunk as well as device.

Thanks to the construction of the vine trunk cleaner, the visual field of the driver is hardly affected, which makes the work easier and the transportation safe. It comes with a rack mounted on rolls for safe parking. This makes it easy to attach and detach the device, because no lifting jack or lift truck is needed.

## Advantages of the freilauber vine trunk cleaner

- Good visual field for the driver thanks to the double lift frame
- Many hydraulic adjustabilities to operate in various vineyards
- Easy to attach and detach
- Two-sided system to halve the working time
- Gentle removal of the sprouts from the trunk
- Also suitable for terraced vineyards
- The vertically mounted rolls also remove sprouts at the bottom of the trunks and only little dust is raised

## Technical Data

- Row width from 1.6 to 2.44 m
- Vertical lift of the frame: 1000 m
- Working height: 470 mm
- Working speed: 4-8 km/h
- Oil requirement: 20 l/min at a pressure of 180 bar
- Series connection of the hydraulic motors
