

Cultivator Magna

With a low centre of gravity for optimum force transmission

The compact and stable frame is a key feature of the Magna cultivator. The front cultivator has a particularly favourable centre of gravity in relation to the tractor and is equipped with hydraulic width adjustment. Thanks to its unique and well thought-out design, it can absorb forces excellently and transfer them to the tractor.

Its variable adjustment options ensure that it can be set for all conditions, e.g. as a long, short or just a pre-cultivator.

It is equipped with very low-wear wing shares or rippers with quick-change system. However, standard handles and the corresponding shares can also be fitted. Thanks to the design and the wide range of attachment options for the shares, clogging is impossible and all shares have overload protection.

Cultivator Magna

Important facts

- Very sturdy construction
- Quick, variable conversion to short or long cultivator
- No clogging
- Height-adjustable crumbler roller

Dimensions

Width	Number of shares	Weight
1,10m - 1,60m	5	520kg
1,30m - 1,80m	5	580kg
1,60m - 2,10m	6	640kg
2,00m - 2,50m	7	700kg
2,50m - 3,00m	8	780kg

*depends on the desired share width

Height-adjustable crumbler roller.
