

Vine trimmer type WR

With linear width adjustment for significantly better weight distribution

The frame with large linear width adjustment always remains in the centre of the tractor, even in the working position. This significantly improves weight distribution and reduces the risk of tipping. The frame tilt is fully maintained on both sides and the tilt cylinders are fitted with locking blocks as standard.

Wear-free plain bearing guidance of the cutting unit suspended in the centre of gravity. Bolted cutting units with 3 mm base shell ensure maximum stability of the cutting unit.

The vine trimmer type WR has individually adjustable side cutting units (also electrically adjustable on request) with separate collision safety devices. The frame can be used universally.

Vine trimmer type WR

Standard equipment

- Cutting length: Horizontal 1 blade (70cm) with drive via V-belt with separate oil motor
- Vertical 3 blades (148 /160cm) or 4 blades (176cm), other lengths on request
- The working width is adjustable from 45-70cm
